Mind Food

For the **past 7 years**, I have been accumulating and strengthening my proficiency in working with Adobe Creative Suite. In the recent years, I have been picking up basic coding abilities, video editing, and 3D modeling, in hopes of broadening my field of knowledge and skills. I strive to continue learning and evolving my skill sets.

Idea Cycle

The idea cycle consists of tools that I use when developing and **communicating a design with** group members and **clients**.

In the Workforce

Fraser Health Authority - Business Systems Analyst

8-month co-op term

Meeting with clients to discuss business solutions in regards to building customized Sharepoint intranet sites and Infopath forms for departments across Fraser Health. Provided in person and online troubleshooting and assistance for Fraser Health Sharepoint users. Redesigned Sharepoint interfaces for the KMBS team. Acted as a teaching assistant for monthly Sharepoint training classes.

Learning Outcome

- > business analyst workflow
- > provide technical training to other employees
- > troubleshooting and customer service
- > improved UX and UI skills
- > high quality interface mockups using Illustrator, Photoshop and Bootstrap

Beedie School of Business - Front-end Web Developer

8-month co-op term

Managed hundreds of web pages and media resources on the official Beedie website. Additionally built web forms, an interactive IOS application mock-up, worked with Wordpress, email templates, designed and built a social media hub for Beedie School of Business (<http://beedie.sfu.ca/social/>).

A memorable experience to be exposed to an abundance of new concepts and technology. Pushing myself beyond my original limit proved to be a huge leap I had taken, and I was generously rewarded intellectually and broadened my skill base.

Learning Outcome

- > strengthening HTML and CSS skills
- > high quality interface mockups in Illustrator, Photoshop and Xcode
- > build responsive user forms using PHP
- > worked with PHP, jQuery, Ajax, JSON, API, and Objective-C
- > juggle major projects under time constraints
